This is a statement that Boyd sends out to parents inquiring about OSR.

To All Parents: We make no claims that OSR can treat any disease or cure any illness. OSR stands for Oxidative Stress Relief which is based on our initial observations that taking OSR increases plasma glutathione levels significantly. OSR has been extensively tested by 3rd party FDA certified toxicology laboratories and no toxic effects have been observed in rats at OSR levels 100 to thousands of times greater than we recommend be used in humans. Also, 3rd party labs have reported that OSR is non-mutagenic, has a good ORAC (oxygen radical absorbance capacity) score and had no effect on pregnancy outcomes when given to pregnant rats in massive doses. We have no indications of any toxicity that can be caused by OSR even at very high doses—which are not recommended. We have fulfilled the FDA new dietary ingredient requirements regarding support of its safety, however, the FDA has not evaluated our position that OSR is an effective antioxidant and a useful dietary ingredient.

OSR is an antioxidant that has the ability to partition into the lipophilic (fatty) tissues of the body and to scavenge damaging free radicals. OSR seems to be of value for a safe process to help in a dietary way those who are suffering from inflammation and oxidative stress. Just being able to scavenge the free radicals (which are the damaging chemicals produced in inflammation) seems to allow the body to salvage much of its reduced glutathione (GSH) most likely causing the increase in body GSH levels. GSH is used for detoxing the body of many toxicants and to protect enzymes from oxidation. I personally have been taking the compound for about 1.5 years and my latest physical showed no abnormal blood chemistry and I have zero physical problems. My personal plasma glutathione levels (LabCorp) was 1,225 with the average index being 669.

CTI Science is a beginning company and cannot make enough

OSR at this time to supply everyone that wants it. Therefore, we are only supplying OSR to MDs or ODs who are treating autistic children. This is also being done to make sure that nothing out of the ordinary happens with a minority that may be sensitive to any sulfur based antioxidant including OSR. It is important to have a physician monitor these children as a precautionary principle. Also, I don't want OSR to be another "pig-in-a-poke" for parents that does not work. Therefore, we are asking all initial users to agree to allow their physician to get before and after (two months later) testing for 3 items: 1. Plasma glutathione level, 2. Urinary porphyrin profile, 3. CRP levels. This testing will tell a parent if their child needs attention to oxidative stress or specific toxicities or if they are under inflammatory stress. It will also tell them if the OSR did any good with regards to helping alleviate the oxidative stress. Please contact your physician to see if they are aware of OSR if you are interested in trying it. Please understand, I just don't have the time or the amounts of OSR to send out individual bottles to parents at this time, but I will accomplish this in the near future.

Boyd Haley

Hi,

I'm also trying to find out more about it. So far this is all I know:

"OSR is short for Oxidative Stress Relief. It is a super antioxidant supplement that scavenges hydroxyl radicals as found in oxidative stress. Again we do not call the compound a chelator. The only thing we do know is it is stated to be a potent antioxidant that has been shown to elevate intracellular glutathione. "

I found this information but still looking for more. Thanks in advance to anyone who can give us more details!

Marie
