Dentistry has a great deal to do with Autism. The mercury from mercury amalgam fillings vaporizes continuously affecting both the sperm and egg at conception. The embryo then concentrates the mercury from the mothers blood by about four fold. If this doesn't cause a birth defect or miscarriage due to the death of the embryo, then the newborn drinks the mothers milk which is laced with the mercury from the fillings. Then add the 200 times more toxic ethyl mercury (compared to the elemental mercury from fillings) in the vaccines and it's a miracle more of our precious babies don't have Autism. So, what does a lowly dentist have to do with Autism, a whole lot! It's the dentists from the IAOMT that educated Dr Boyd Haley about the harmful effects of mercury from fillings. Be thankful that OSR was FDA approved and is available. Whether you buy it from me or someone else, if you can find it, makes no difference to me. I invested \$8400 in a supply for my family, friends, and patients and will offer it to anyone for the same price I charge my patients.
